

- What do I want to learn or understand better?

How we can integrate our solution, application, to the intended services. We have decided what to do and it requires our solution to be able to work with two other different programs, or their API's. It seems difficult doing it with one, so two even more so. Therefore I would like to understand how we can do this, which I will try to do by reading the documentation provided with the API's, hopefully finding out also if it is feasible.

- How can I help someone else, or the entire team, to learn something new?

I think I can help anyone on the team by being supportive and help them if it is needed. Currently, I do not have that much things going on so time is on my side. Therefore, if anyone on the team needs help with anything I should be able to help out. Right now, we don't have any particular areas of responsibility, like user stories, therefore everyone does everything. But with the start of the sprint after re-exam period, people might run into challenges with their personal stories and tasks, then I should be able to help.

- What is my contribution towards the team's use of Scrum?

So far we have not really used Scrum in our progress to create our Projects Scope. So my contribution is zero towards Scrum usage, except for in the workshops where we got to use, and it turned out rather well I feel. The problem were the short time periods which did not allow us to actually have proper sprint planning meetings, retrospective, review etc. After Easter when we start with Scrum "for real" I want us to carefully plan our sprint, creating user stories, setting up definitions of done and so on. In order to achieve this I feel like what we need to do is take our time and not rush things. It will be our first sprint and it will most likely not be very good "Scrum wise".

- What is my contribution towards the team's deliveries?

I have been part of the discussion regarding our project scope, what is possible to do and what is not, mostly by being part of the first draft visual mockup. I would like to be more involved in using our KPI:s I feel we have not used them at all yet, even though two of them are possible to evaluate right now. To get us to use the KPI:s I, and the team, will need to remember and remind each other to evaluate the KPI:s during the sprints.
