- What do I want to learn or understand better?

How to properly write user stories. This week we started trying to create our epics, features and user stories. However, it was ridiculously difficult for us to create stories that were both small and independent. Maybe it is just during the start up of the project we will have these difficulties, since it is hard to do anything at all until you have a code skeleton to start working at. Atleast, that is how we feel, therefore our stories are nothing like vertical our INVEST at all. Hopefully we will get help with that next week from our mentor.

- How can I help someone else, or the entire team, to learn something new?

By sharing guides and tips about our work environment. We are all new to Android Studio and even if it is rather similar to creating a desktop app with java and fxml, it is not identical. Therefore, a lot of the problems we encountered this week, in terms of coding, mostly related to us not knowing fully understanding how to do it in Anroid Studio, when we could have solved it rather easily in a familiar environment. Hence, when I do find out about something useful that I think everyone else would benefit from, I should share it. Right now, I only do if someone asks for it, but people don't always ask, instead they might try solve it on their own, which could result in us having different solutions for the same problem, which makes for a bad coding standard.

- What is my contribution towards the team's use of Scrum?

Not that much I feel like right now. As stated above, we are quite confused on how to write stories and such, therefore our use of scrum right now is rather scuffed overall. I should suggest we start using daily stand-ups, since right now, I do not really know how everyone else are doing with the progress of their stories, but it also feels like not everyone would have time for it, I am just confused and it makes me stressed.

- What is my contribution towards the team's deliveries?

I have been working with the user story I've been assigned, but also trying to get my head around what we should be doing next. Because we were told we would probably overestimate our workload it seems we may have underestimated instead, resulting in that we have not got too much done this sprint. Going forward, we will have to assign ourselves bigger workloads, then I think I would be able to contribute even more to our deliveries.
